System Requirements

To ensure optimal performance, particularly for the high-performance rendering components, the following specifications are recommended.

Minimum Requirements:

OS: Windows 11

Python: Version 3.10 or higher

Graphics: Integrated graphics

Recommended Hardware:

CPU: AMD Ryzen 5 7520U (or equivalent)

GPU: Dedicated graphics card (NVIDIA RTX series recommended for stable high frame rates).

Peripherals: Any mouse and keyboard

Introduction

Welcome to Mouse Trap, a strategic, turn-based interactive experience developed by Team SomethingGood?. Featuring a refined dark-grid aesthetic and a playful mascot interface, Mouse Trap blends solid software engineering with intuitive UI design. This manual provides clear instructions for setting up, configuring, and navigating the application environment.

Overview

The Mouse Trap project is built on the Pygame framework, utilizing a robust state-management system controlled by a central GameManager .

Main Menu: Features a physics-based bouncing "Mouse Face" logo with edge-collision detection.

Responsive UI: Semi-transparent panels and reactive buttons that provide visual feedback on hover.

State Architecture: Seamless transitions between the Menu, Setup, and Gameplay states.

Audio Control: Built-in music toggling and volume persistence.

System Requirements

To ensure optimal performance, particularly for the high-performance rendering components, the following specifications are recommended:

Minimum Requirements:

OS: Windows 11

Python: Version 3.10 or higher

Graphics: Integrated graphics

Recommended Hardware:

CPU: AMD Ryzen 5 7520U (or equivalent)

GPU: Dedicated graphics card (NVIDIA RTX series recommended for stable high frame rates).

Peripherals: Any mouse and keyboard

Quick Start

- Plug in provided flash drive
- Open flash drive in file explorer
- Open game folder
- Run the only application in the folder
