OK.

## 1.2.2 Specific Goals

We are going to make the game from a 2D top-down perspective. It will have a cat player and a mouse player. The cat will be playing to trap the mouse in the field whereas the mouse will aim to escape the field so that it doesn't get eaten. There will be buttons for

## 1.3 Overview of Document

The document will have all of the information regarding our project and the hardware and software needed for the game application. There is also the description of what the game application will do.

## 2. System

### 2.1 Target Environment

The project development environment will include a Hardware and Software portion with the following specifications:

#### Hardware:

Computer

#### Software:

VS Code

Python (Pygame)

Windows 11

#### Prototypes

headers

It will discuss the mechanics of the game, such as the cat and mouse, and the game's environment, such as the field and the obstacles.

will describe

Section 2, ...

Section 3, ...

Section 4, ...

The hardware and software needs for developing

PC with how much RAM, hard drive, ...

IDE?

fun or boring?  
Not what I want  
call narrative

## 1. Introduction

### 1.1 Purpose

The purpose of this document is to gather all necessary information for developing a board game style application inspired by the mechanics of the game Mouse Trap.

### 1.2 Scope

#### 1.2.1 Main Objective

We plan to have a fully complete prototype done within the limitations given to us with only a couple months and a small team of 5

#### 1.2.2 Specific Goals

We are going to make the game from a 2D top down perspective. It will have a cat player and a mouse player. The cat will be playing to trap the mouse in the field whereas the mouse will aim to escape the field so that it doesn't get eaten. There will be buttons for

### 1.3 Overview of Document

The document will have all of the information regarding our project like the hardware and software needed for the game application. There is also the description of what the game application will do.

## 2. System

### 2.1 Target Environment

The project development environment will include a Hardware and Software portion with the following specifications:

#### Hardware:

- Computer

#### Software:

- Vs Code
- Python (Pygame)
- Windows 11

#### Prototype

headers

No. describe

Requirements for

not crazy about his font

It will describe the scope of the project and the functional requirements and

will describe

Section 2, ---

Section 3, ---

Section 4, ---

The hardware and software needs for development

PC with how much RAM, hard drive, ? specs

IDE ?

this is skimping  
Not what I'd  
call narrative.

## 2.2 Who Are the Users

The users of this game app will be members of the customers company, such as employees so they can have fun in their downtime while off the clock so that it may boost morale. There is more than one option that you can play as in the game application the trapper or the mouse. The trapper will be trying to capture the mouse to make sure that it can't escape whereas the mouse will attempt to escape from them.

← phrasing?

## 2.3 Functional Requirements:

### 2.3.1 Issues

The main issues with this project will be the time limit that we have set to finish this. We won't be able to give the customer a perfect version of our program but we are focusing on giving a strong prototype that will sell the idea of the game application to the customers showing the full capabilities to them.

not functional

too casual!

this section describes the way that it's it?

### 2.3.2 Major System Functions

- Gameboard will keep track of mouse position
- Mouse (player) will keep track of what spots are blocked or not

### 2.3.3 Minor System Functions

- Displays whose turn it is
- Displays the mouse on the board
- Displays the buttons
- Displays the gameboard (hexagonal)

UI "keep track of"

maintain status of Board

2.4

### 2.3.4 Major Classes Identified

- Player Class
- Trapper Class (child of Player class)
- Mouse Class (child of Player class)
- Button Class

## 2.4 Non-Functional Requirements

### 2.4.1 Management

There are plenty of management problems with this project because we only have a couple months to organize, plan, and execute this project

There exists only a few weeks.

### 2.4.2 Technical

The project will be developed and must be run in a Windows 10/11 system. The project will be written in Visual Studio Python utilizing PyGame for UX/GUI features.

on PC

### 2.4.3 Performance

Trapper is a player?

*vague study Better written for quiz test.*

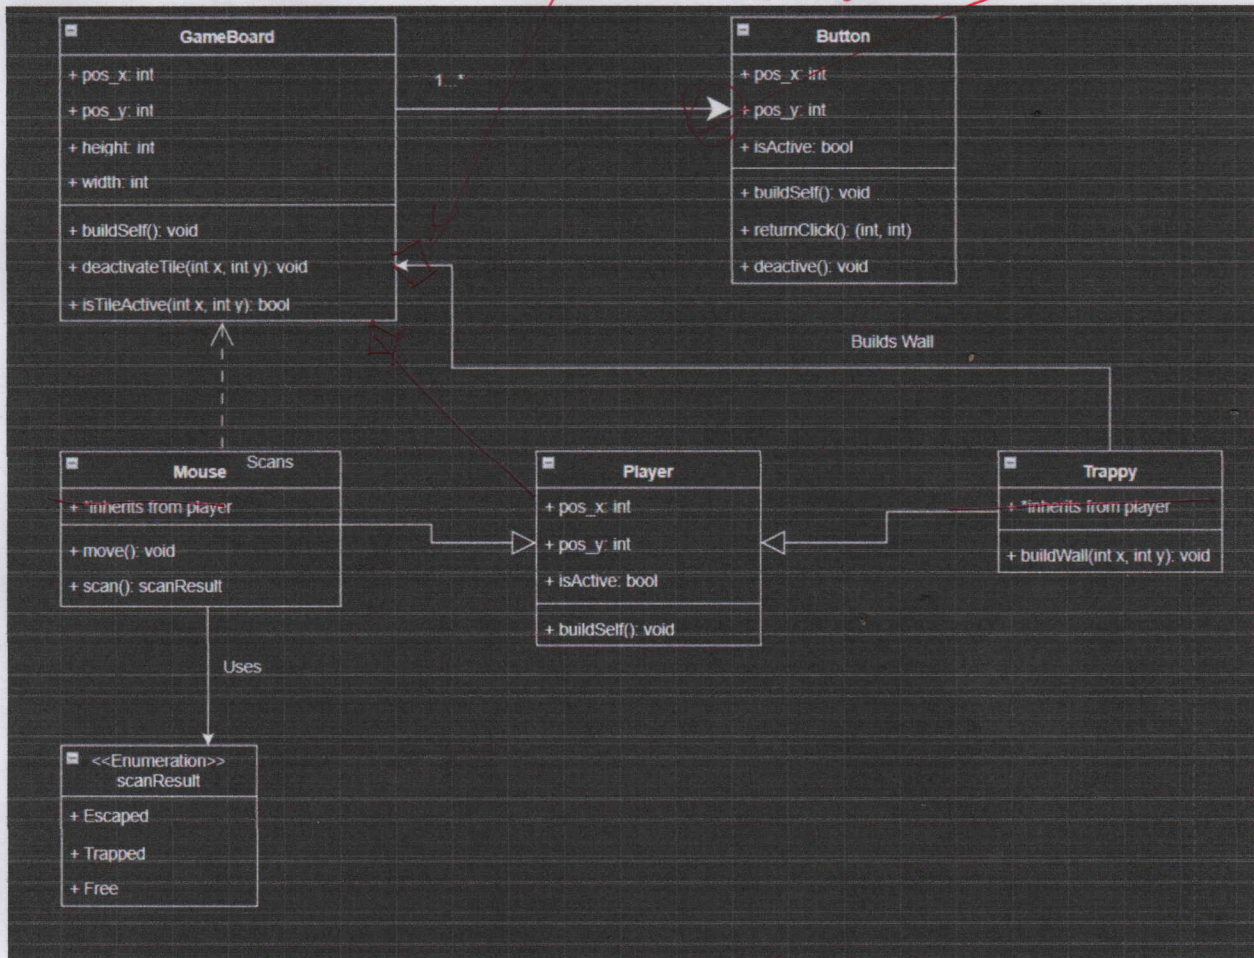

The project should promptly respond to user input with little delay. It should also be user friendly so that new players can quickly learn and play the game.

### 3.Risks

The risks involved with this game include unavailability of team members and lack of communication. This can be countered by keeping each other accountable, establishing forms of communication, and frequent meetings.

### 4.UML Diagrams

*aggregation*

*3 symbols*

Figure 1. OOA Class Diagram.

*Needs paragraph to describe it.*

Table 1.

| Risk | likelihood | mitigation. |
|------|------------|-------------|
|      |            |             |

*Trappy is a player?*

*Game
