

1. Introduction

1.1 Document Purpose

The purpose of this document is to outline the outcome of our actions. The tests we tested on, what we did, and what we expect to happen when we use it is us trying to mess with it.

1.2 Objective

We are trying to achieve a document that we expect to have when we are done.

1.3 Test Team Members

Team: Jose, Zach

We will mainly test MouseTrap by playing it and checking if everything is working as intended. This includes the buttons and the game to make sure it handles everything.

2. Testing strategy/techniques

We are going to use black box techniques because this game is heavily user interactive and so most of the things will be

3. Test Schedule

The testing schedule is carried out after new code has been sent and pushed to the github. This means that after every time we push code we will test it and use blackbox testing to find any faults.

4. Testing Constraints

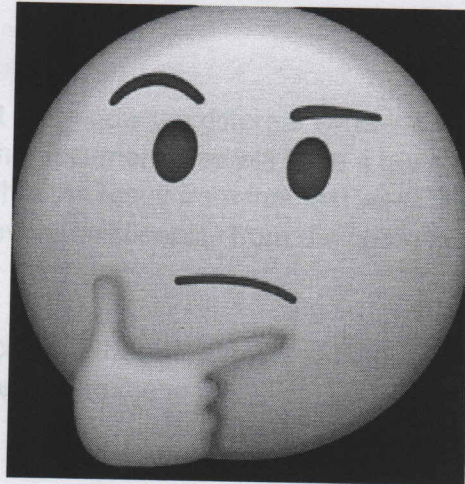

There are some constraints because of the experience we have. This means that this is the first time we will go through this process. There is also the fact that we only have a very limited time to actually test the game. The time limit means that we only have time for the most important stuff.

1. Introduction

1.1 Document Purpose

The purpose of this document is to show the different ways we decided to test our game to see the outcome of our actions. The document also will have a table of which screen the test was tested on, what we did, and what the result from that test was. The strategies we are going to use is us trying to mess with every functionality from the game from buttons to the music.

1.2 Objective

We are trying to achieve a document that will show and highlight our testing methods, cases and what we expect to happen when doing these tests.

1.3 Test Team Members

Team: Jose, Zach

We will mainly test MouseTrap by playing the game and checking if everything is working as intended. This includes the buttons mainly and then we will mess with the game to make sure it handles everything.

2. Testing strategy/techniques

We are going to use black box techniques because this game is heavily user interactive and so most of the faults will be

3. Test Schedule

The testing schedule is carried out after new code has been sent and pushed to the github. This means that after every time there is more code we go into the game and use blackbox testing to find any faults.

4. Testing Constraints

There are some constraints because of the experience we have. This means that this is the first time we will go through this process. There is also the fact that we only have a very limited time to actually test our game. The time limit means that we will only have time for the most noticeable faults.

5. Test Cases

Screen Name	Test Action	Expected Result
Title Screen	Play Button	Leads to the game setup menu
	Music Button	Turns on and off the music
Game Setup Screen	1 Player Button	Highlight and wait for start game button

Win Screen(Trapper)	2 Player Button	Highlight and wait for start game button
	3 Player Button	Highlight and wait for start game button
	4 Player Button	Highlight and wait for start game button
Test Results	Start Game Button	Starts game with selected amount of players
Game Board Screen	(players turn) move one ^{space} left right up down ?	Move to selected hex spot
	(player turn) move to spot outside of highlighted area	Mouse wont move until select highlighted spot
Game Setup Screen	(trapper turn) select anywhere on board to place ^{wall} select row 2 col 3	Places wall where selected
	(trapper turn) Click in between 3 spots at once ?	Doesn't place wall until clearly defined where you clicked
	(trapper turn) Click on barrier(blue)	Doesn't place wall Won't place wall unless green area selected
	(players turn) players can stack	The players shouldn't be able to stack but they are able to stack
Pause Menu Screen	Restart Button press	Goes back to game starting screen
	Resume Button Press	Continue playing where you left off
	Menu Button Press	Goes to the main menu
	Quit Button Press	Closes the game
	Music Button	Stop and start the music
Win Screen(Trapper)	Menu button	Goes to main menu screen
	Play again button	Send you to the game selection screen
	Quit button	Closes the game

Win Screen(Mouse	Menu Button	Goes to main menu screen
Pause Menu Screen	Play again button	Send you to the game selection screen
	Quit button	Closes the game

6. Test Results

Screen Name	Test Action	Result
Title Screen	Play Button	Leads to the game setup menu
	Music Button	Turns on and off the music
Game Setup Screen	<i>Click</i> 1 Player Button	Highlight and wait for start game button
	<i>Click</i> 2 Player Button	Highlight and wait for start game button
	3 Player Button	Highlight and wait for start game button
	4 Player Button	Highlight and wait for start game button
	<i>Press</i> Start Game Button	Starts game with selected amount of players
Game Board Screen <i>or move to any spot?</i>	(players turn) move one <i>Actual Data</i> <i>Row 3, col 2</i> space	Moved ^{<i>to</i>} selected hex spot <i>moved to row 3, col 2</i>
	(playe turn) move to spot outside of highlighted area	Mouse wont move until select highlighted spot <i>doesn't</i>
	(trapper turn) select anywhere on board to place wall <i>row 3, col 4</i>	Places wall where selected
	(trapper turn) Click in between 3 spots at once	Doesn't place wall until clearly defined where you clicked
	(trapper turn) Click on barrier(blue)	Doesn't Won't place wall unless green area selected.
	(players turn) players can stack	Fail The players shouldn't be able to stack but they are able to

		stack
Pause Menu Screen	Restart Button press(fixed)	Game crash
	Resume Button Press(fixed)	Game crash
	Menu Button Press(fixed)	Game Crash
	Quit Button Press(fixed)	Game crash
	Music Button(fixed)	Game Crash
	Restart Button press	Goes back to game starting screen
	Resume Button Press	Continue playing where you left off
	Menu Button Press	Goes to the main menu
	Quit Button Press	Closes the game
	Music Button	Stop and start the music
Win Screen(Trapper	Menu button	Goes to main menu screen
	Play again button	Send you to the game selection screen
	Quit button	Closes the game
Win Screen(Mouse	Menu Button	Goes to main menu screen
	Play again button	Send you to the game selection screen
	Quit button	Closes the game

7. Test Report

The tests came back relatively with little to no faults; the only fault was multiple because there was an issue with a variable name. What happened was that when playing the game if the pause button was pressed any other button it would crash the game. There was a variable that was misspelled.

? So which one failed.
